

JOEL A

codejoe68333@gmail.com | joel1-coder.github.io/portfolio-web/
https://github.com/joel1-coder | https://www.linkedin.com/in/joel-a-web-developer/

Skills

Database: MongoDB.

Tools & Platforms : GitHub, Git.

Frontend Development : HTML, CSS, JavaScript.

Frameworks/Libraries: React.js, Next.js, Express.js.

Backend Development : Node.js .

Work Experience

FRONTIERWOX TECH PRIVATE LIMITED, Tiruchirappalli.(INTERN)

Feb 2026 - Present

Web Developer

- Working as a Team Lead (TL) & Web Developer
- Leading a development team while actively contributing to building scalable web applications.
- Worked on designing and developing the Notivo web application, focusing on efficient workflow management and user-friendly features
- Gained hands-on experience in team coordination, task delegation, and understanding team dynamics to ensure smooth project execution.

Education

St. Joseph's College,Tiruchirappalli. B.Sc (Computer Science) CGPA:6.97/10

June 2024 - Present

Relevant Coursework: Object Oriented Programming, Database, Data Structures and Algorithms.

Projects

Attendance Management System, (MERN Stack)

<https://college-attendance.vercel.app/login>

- Built a full-stack MERN attendance management system replacing manual registers for college CS lab staff
- Implemented JWT-based role authentication with separate Admin and Staff portals and protected API routes
- Designed MongoDB schema with 5 collections — Users, Students, Departments, Sections, Attendances — using ID referencing to avoid data repetition
- Enabled monthly and yearly attendance and marks export to Excel for institutional reporting

BPC — Canteen Management System , (MERN Stack)

<https://balaji-perfect-caters.vercel.app/login>

- Developed a full-stack canteen management platform with three role-based portals — Admin, Operator, and Public
- Built RESTful APIs for menu management, staff scheduling, billing transactions, and student discount offers
- Implemented automatic MongoDB Atlas failover to in-memory database ensuring zero downtime during connectivity loss
- Designed a QuickBill touch interface for counter operators with real-time discount application and receipt generation

Venue Booking System— Room Booking System , (MERN Stack)

<https://jobook-seven.vercel.app/login>

- Built an institutional room booking system using the MERN stack with admin approval workflow, real-time slot availability indicators, and in-app notification system for booking status updates.
- Designed MongoDB collections for Rooms, Bookings, Users, TimeSlots, and Notifications using ID referencing with Mongoose schema validation.
- Automated booking reference generation producing unique formatted IDs (BK-0200) on every booking insert using a counter-based MongoDB sequence logic.
- Integrated SheetJS for client-side Excel export of booking reports with dynamic column formatting and timestamped filenames.

Notivo — Task & Workflow Management System, (MERN Stack)

<https://notivoworksjc.vercel.app/login>

- Developed a full-stack MERN admin dashboard for task management, form building, and user submission tracking
- Implemented JWT authentication with role-based access control and centralized Axios API service layer
- Built a dynamic form template builder with reusable template storage and multi-format data export — Excel, CSV, and JSON
- Resolved critical XLSX export bug and transitioned entire application from mock data to live MongoDB database

Certification:

DATABASE MANAGEMENT SYSTEM

JULY 2025 - AUGUST 2025
